

Company Profile

Camilion Solutions is a leading provider of product development and management solutions for insurance and other financial services organizations. Camilion's innovative software solutions create enterprise product agility by allowing organizations to develop the right product for the right customer at the right time and enabling key strategic initiatives such as product lifecycle management, dynamic product bundling and product rationalization.

Some of the world's largest financial services organizations are currently in production with Camilion's ProductAuthority®, using it as a standalone enterprise product development and management solution, or as the innovative product agility platform on which Authority Suite®, a P&C Policy Administration System, is built. ProductAuthority® brings new levels of automation and efficiency to the product development process, enabling organizations to get quality products to market up to 30% faster. Built on a modern rules and tools-based technology platform, Authority Suite® is the insurance industry's most product-agile P&C Policy Administration System.

Founded in 2001, Camilion is a privately owned corporation with offices in Toronto and New York City.

Software

Authority Suite® powered by ProductAuthority®, is the most product-agile P&C policy administration system available. Supporting complete ISO Electronic Rating Content™ for all ISO and company-specific lines of business, it is a single solution for Commercial, Personal, and Specialty insurers. Authority Suite offers an advanced underwriter workstation and supports the entire policy administration lifecycle including application data capture, qualification, rating, pricing, quote management, bind and issuance and all policy transactions. With sophisticated insurance product configuration and management capabilities at its core, this "no code" solution enables the easy inheritance and re-use of pre-built company rates, rules, forms and calculations from a central product repository to accelerate growth.

ProductAuthority®, an innovative product development and management solution for financial services, enables enterprise product agility by allowing organizations to create the right product at the right price at the right time. With ProductAuthority, you can develop information-based products concurrently to enhance revenue; automate manual processes to reduce costs and create audit-ability; dynamically bundle products to create greater customer value; and get quality products to market up to 30% faster.

ProductAuthority also includes Lifecycle Manager which automates product development and provides a Web-based view into the process, enabling the tracking and management of all participants and tasks to facilitate effective collaboration and

eliminate bottlenecks.

ProductAuthority externalizes product definitions from multiple, hard-coded operational systems into a central repository where product components can be easily inherited to modify existing or develop new products—in months not years. Product definitions include re-usable information such as eligibility, packaging, underwriting rules, rates, calculations, and forms management.

The Camilion Advantage

- The first policy administration system that completely automates the implementation of rates and rules for all lines - as interpreted by ISO.
- **Reduce IT Costs** associated with product development by 20%
- **Accelerate product development**, increase capacity, and develop multiple products concurrently.
- **Delivery quality** products to market up to 30% faster.
- **Gain visibility** into product development processes to reduce costs, eliminate bottlenecks.
- **Modern, flexible, and scalable technology** that conforms to key insurance industry standards and leverages a Service-Oriented Architecture (SOA).
- **Intuitive rules and tools-based solutions** that put power in the hands of business users by letting them configure, update, and extend the solutions themselves.
- **Best-in-Class Professional Services** from a team that has a deep knowledge of the insurance industry and best practices obtained through years of real-world experience.
- **A proven phased implementation methodology** that focuses on rapid business results and client self-sufficiency.
